During the year, eleven sets of letters patent have been issued: Two new insurance companies were incorporated, and revisions to the charters of seven insurance companies and two fraternal benefit societies were made.

The figures have been kindly furnished by the companies and societies in response to a circular letter issued by the Department and while replies have not been recieved from all of them, the omissions are not believed to be important. These figures have been incorporated in the following table to show the total life insurance in Canada for 1981 on a direct basis.

## Canadian Companies: Investments under Subsection 63(4), of the Canadian and British Insurance Companies Act

In 1948, the Canadian and British Insurance Companies Act was amended establishing a "Basket Clause". This permits Canadian companies to acquire investments not falling within regularly prescribed classes. The original limit on such investments was 3% of the total book value of a company's assets. Further amendments were made altering the limits in 1961, 1965 and 1977. The current limits, as a percentage of the total book value of a company's assets, are 7% for investments other than real estate and 7% for real estate. Of the investments in real estate, a limit of 2% may be non-income producing.

## Policy Loans (All Companies)

During the ten years 1929-1938 there appeared in the Reports a summary of the trend of policy loans and the ratio of policy loans to policy reserves at intervals since the year 1910. The figures in the report of 1938 show that, for some years up to 1928, the ratio of loans to reserves in Canada for all companies was quite uniform at about 15%; that thereafter a marked increase in the volume of loans and in the ratio occurred to a maximum ratio of 20.9% in 1932, and that a gradually reducing ratio was shown from the latter year until 1938 when it reached 15.8%. The ratio declined to a level of 5.8% in 1949 then varied between 4.8% in 1965 and 6.8% in 1978. The ratio for 1981 was 8.1% determined as follows:

| | Loans | Reserves | Ratio |

# Life Insurance

## GENERAL REMARKS

During 1981, the volume of life insurance in force in Canada issued by federally registered life insurance companies and fraternal benefit societies more than maintained the steady trend of growth. As indicated in Tables XLIII and LXIX of the Report, the amount of life insurance in force in Canada at the end of 1981 stood at $469 billion, recording an increase of 15% over the corresponding figure for 1980. Of this total volume in force, $280 billion, or 60%, represented insurance issued under group contracts sold to employers, unions, professional associations and creditor group contracts. The net amount of individual insurance in force in Canada at the end of 1981 was $189 billion.

While virtually all of the group insurance represents term protection, the volume of term protection contracts out of the total volume of individual insurance in force is significant. Ignoring reinsurance it is estimated that 57% of the amount of individual insurance in force in Canada is of the term variety. Again ignoring the effect of reinsurance, and excluding business in respect of fraternal benefit societies, it is estimated that, of total newly effected individual insurance in Canada amounting to some $54.1 billion, 75%, or $40.4 billion, comprised term insurance or temporary additions.

Total net premiums for life insurance in Canada (excluding premiums or considerations for annuities), were $3.5 billion for 1981 (an increase of 9% over the previous year); of this, $2.4 billion, or 69%, was paid under individual contracts, the balance being accounted for by group contracts. Canadian incorporated companies continued to account for 72% of the net premiums for life insurance in Canada as in 1980 and the year previous.

Newly effected individual life insurance issued in Canada, net of all reinsurance, was estimated as $43.7 billion in 1981; this represents an increase of 29% over the 1980 figure as compared to an increase of 20% for the previous year. The net amount of new group insurance coverage issued during the same period also recorded a significant growth to $27.5 billion or 15% over 1980 as compared to 4% and 8% growth of the previous two years respectively.

The total net premium income in Canada for life insurance including annuities amounted to $7.95 billion, an increase of 30% as compared to 1980. Of this, $4.48 billion, or 56.3% of the total, represented considerations for annuity contracts, registering a significant increase over the corresponding figure for 1980. In 1980 and prior years, annuity premiums represented less than 50% of total life company premium income. Of this total of $4.48 billion, $2.74 billion or 61% represented premiums received under individual annuity contracts with the remaining $1.73 billion, or 39%, arising from group annuity contracts issued to employers wishing to provide pension benefits to their employees.

As respects dividends to participating insurance and annuity policyholders in Canada, a total of $673 million was paid or credited to their accounts in 1981. This figure represented an increase of 13% over that for 1980.

## Accident and Sickness Insurance transacted by life insurance companies

Net written premiums in Canada for accident and sickness insurance transacted by life insurance companies in 1981 also maintained a steady trend of growth to $1.85 billion, an increase of 17% over 1980. The assets supporting the accident and sickness business in Canada increased by 16% during the year and stood at $2.55 billion at the end of 1981.

The net claims ratio on accident and sickness business in Canada, which measures the relationship of the net claims incurred to net premiums earned, decreased from 90% in 1980 to 86% in 1981.

## LETTRES PATENTES EMISES EN VERTU DE LA LOI SUR LES COMPAGNIES D'ASSURANCE CANADIENNES ET BRITANNIQUES

Les modifications apportées à la Loi sur les compagnies d'assurance canadiennes et britanniques mises en vigueur le 12 mars 1970 ont permis l'utilisation de lettres patentes à la place de la procédure de la Loi spéciale lorsqu'il s'agit de constituer en société de nouvelles compagnies d'assurance canadiennes et de modifier les chartes des compagnies d'assurance et des sociétés de secours mutuels canadiennes existantes. Durant l'année, onze jeux de plus de lettres patentes ont été émis. Deux nouvelles compagnies d'assurance ont été constituées en société: des révisions ont été apportées aux chartes de sept compagnies d'assurance et de deux sociétés de secours mutuels.

Le Département a maintenu l'usage de recueillir des renseignements des compagnies et sociétés dont le fonctionnement relève de l'administration provinciale seulement. Les compagnies et sociétés ont eu l'obligeance de fournir les chiffres en réponse à une lettre circulaire émise par le Département; des réponses n'ont pas été reçues de toutes les compagnies et sociétés mais les omissions ne sont pas jugées importantes. ## Compagnies canadiennes: Placements en vertu du paragraphe 63 (4) de la Loi sur les compagnies d'assurance canadiennes et britanniques

En 1948, la Loi sur les compagnies d'assurance canadiennes et britanniques a été modifiée afin d'établir la «Clause Omnibus». Cette clause permet aux compagnies canadiennes d'acquérir des placements en plus des catégories régulièrement prescrites. La limite initiale sur ces placements était de 3% de la valeur comptable totale de l'actif de la compagnie. D'autres changements ont été apportés en 1961, 1965 et 1977 afin de modifier les limites. Les limites actuelles en pourcentage de la valeur comptable totale de l'actif de la compagnie sont 7% pour les placements autres que les biens-fonds et 7% pour les biens-fonds. Une limite de 2% peut comprendre les placements en biens-fonds non productifs de revenus.

Avances sur polices (toutes les compagnies)

Pendant dix années, soit de 1929 à 1938, un résumé de la tendance des avances sur polices et du rapport entre les avances sur polices et les provisions actuarielles depuis 1910 était inclus dans les rapports. Le rapport de 1938 indique que pendant plusieurs années, soit jusqu'à 1928, le rapport entre les avances et les réserves au Canada pour toutes les compagnies se maintenait de façon très uniforme à 15% environ. Il s'est ensuite produit une augmentation marquée du total des avances et du rapport; celui-ci a touché un maximum de 20.9% en 1932 après quoi il a baissé graduellement pour atteindre 15.8% en 1938. Le rapport est descendu à 5.8% en 1949, et a ensuite varié entre 4.8% en 1965 et 6.8% en 1978. Le rapport en 1981 était de 8.1% et a été établi comme suit:

## Assurance-Vie

### OBSERVATIONS GENERALES

Mentionnons, en premier lieu, que tous les renseignements donnés ci-dessous visent l'ensemble du Canada. L'accroissement du volume des primes d'assurance-vie émises par des compagnies d'assurance-vie ou des sociétés de secours mutuels enregistrées auprès du gouvernement fédéral s'est accéléré en 1981. Comme on peut le constater aux tableaux XLIII et LXIX du rapport, la valeur nette de l'assurance-vie à la fin de 1981 se chiffrait à 469 milliards $, soit à 15% de plus qu'à la fin de 1980. Elle était attribuable à 60% (280 milliards $) à des assurances collectives contractées par des employeurs, des syndicats, des associations professionnelles et des créanciers. La valeur nette des assurances individuelles s'établissait, pour sa part, à 189 milliards $.

Presque tous les contrats collectifs assurent une protection temporaire. La valeur des assurances temporaires représente également une fraction notable des assurances individuelles. Réassurances exclues, les assurances temporaires interviennent pour 57% des assurances individuelles. Mises à part les réassurances et les activités des sociétés de secours mutuels, environ 75% (40.4 milliards $) des nouvelles assurances individuelles, qui sont de l'ordre de 54.1 milliards $, correspondent à des assurances ou à des options temporaires.

La valeur nette des primes d'assurance-vie (primes pour rentes et attributions à des rentes de règlement exclues) atteignait 3.5 milliards $ pour 1981, dépassant de 9% celle de l'année précédente; ces primes découlaient dans une proportion de 69% (2.4 milliards $) de contrats individuels. Les compagnies canadiennes versaient 72% du total net des primes d'assurance-vie, tout comme en 1980 et pendant les années précédentes.

Les nouvelles primes individuelles d'assurance-vie, sans tenir compte des réassurances, ont été évaluées à 43.7 milliards $ pour 1981; cela représente une augmentation de 29% par rapport au total de 1980, lequel dépassait de 20% celui de l'année précédente. La valeur nette des nouvelles assurances collectives émises au cours de la même période a également enregistré une poussée de 15% par rapport à 1980, atteignant 27.5 milliards $, comparativement à 4% et à 8% respectivement durant les deux années précédentes.

Le revenu net des primes d'assurance-vie, rentes incluses, a atteint 7.95 milliards $, dépassant de 30% les chiffres de 1980. De cette somme, 4.48 milliards $, soit 56.3%, correspondaient à des attributions à des rentes de règlement ce qui représente une augmentation notable par rapport à 1980. En effet, au cours de 1980 tout comme des années précédentes, les primes des contrats de rentes fournissaient moins de 50% du revenu des primes touché par les sociétés d'assurance-vie. 61% de ces 4.48 milliards $, soit 2.74 milliards $, correspondaient à des primes perçues en vertu de contrats individuels de rentes; le reste, soit 39% ou 1.73 milliard $, provenait de contrats collectifs de rentes conclus avec des employeurs désireux d'assurer une pension à leurs employés.

En ce qui a trait aux participations des sommes atteignant le total de 673 millions $ leur ont été versées ou créditées en 1981, soit 13% de plus qu'en 1980.

### Transactions des compagnies d'assurance-vie dans le domaine de l'assurance-accident et maladie

Le montant net des primes d'assurance accident, et maladie prévues dans les contrats conclus par les compagnies d'assurance-vie en 1981 a également continué sa poussée et a atteint 1.85 milliard $, grâce à une augmentation de 17% par rapport à 1980. L'actif servant à couvrir les indemnités d'accidents et les prestations de maladie a augmenté de 16% au cours de l'année et atteint 2.55 milliards $ à la fin de 1981.

Pour ce qui est de l'assurance accident, et maladie, le rapport des sinistres aux primes, qui porte sur les sommes nettes, a glissé de 90% en 1980 à 86% en 1981.

# ILLUSTRATIVE DIVIDENDS TO POLICYHOLDERS OF LIFE INSURANCE COMPANIES DECLARED DURING THE YEAR (OR AT LAST PREVIOUS ALLOTMENT IN THE CASE OF CERTAIN BRITISH COMPANIES)

# EXEMPLES DES BENEFICES ATTRIBUES AUX ASSURES DES COMPAGNIES D'ASSURANCE-VIE DURANT L'ANNEE (OU A LA DERNIERE REPARTITION DANS LE CAS DE CERTAINES COMPAGNIES BRITANNIQUES)

## ILLUSTRATIVE DIVIDENDS TO POLICYHOLDERS

In previous reports, it has been the practice to publish under the above heading, for each company issuing participating policies, information on premiums charged and on dividends paid during the year under review for participating whole life, 20-payment life and 20-year endowment policies issued 3, 6, 9, 12 and 15 years prior to the year under review. Figures were published for policies issued at ages 25, 35, 45 and 55. Companies were required to provide this information in the annual statement filed with the Department.

When the statement form was revised in 1978, the format of the information required regarding premiums and dividends was changed. Companies are now required to provide the following information in respect of a whole life participating policy for $10,000, a whole life non-participating policy for $10,000, and a 5-year renewable and convertible term insurance for $100,000:

(1)the annual premium charged on such policies currently being issued at ages 25, 35, 45, 55 (for 5-year renewable term insurance, information must also be given on the premiums to be charged at each of the next three 5-year renewal periods);

(2)guaranteed cash surrender values, if any, at durations of 5, 10, 15 and 20 years;

(3)for participating policies the dividends that the company would pay at each of durations 1 through 20 if the current scale of dividends were to be maintained (dividends, of course, are not guaranteed).

This information is sufficient to permit the calculation of most of the cost comparison indices that may be of interest to consumers.

Because of the volume of the data, it has not been published in this report. However, anyone interested can obtain this information in regard to any registered company by writing to the Department of Insurance, Ottawa, Ontario, K1A 0H2.

## EXEMPLES DE PARTICIPATIONS

Dans les rapports antérieurs, on avait l'habitude de publier sous la rubrique figurant ci-dessus, en ce qui concerne chaque compagnie qui établit des polices avec participation, des renseignements relatifs aux primes prélevées et aux participations versés pendant l'année à l'étude, dans le cas des polices d'assurance-vie entière avec participation, des polices d'assurance-vie de 20 paiements et des polices d'assurance mixte de 20 ans, établies 3, 6, 9, 12 et 15 ans avant l'année à l'étude. Les chiffres relatifs aux polices émises aux âges de 25, 35, 45 et 55 ans ont été publiés. On avait demandé aux compagnies de fournir ces renseignements dans l'état annuel présenté au Département.

Lorsque le formulaire de l'état a été révisé en 1978, la formule de présentation des renseignements requis concernant les primes et les participations a été modifiée. Dans le cas d'une police d'assurance-vie entière avec participation de 10,000 $, d'une police d'assurance-vie entière sans participation de 10,000 $, et d'une police temporaire de 5 ans renouvelable et transformable de 100,000 $, les compagnies devront maintenant fournir les renseignements suivants:

1) la prime annuelle prélevée sur les polices qui sont établies couramment aux âges de 25, 35, 45 et 55 ans (dans le cas de l'assurance temporaire renouvelable de 5 ans, des renseignements doivent également être fournis à propos des primes qui seront prélevées à chacune des trois prochaines périodes de renouvellement de 5 ans);

2) les valeurs de rachat en espèces garanties, s'il en est, aux échéances de 5, 10, 15 et 20 ans;

3) dans le cas des polices avec participation, les participations que la compagnie prévoirait verser à chacune des échéances allant de 1 à 20, si le barème actuel était maintenu (les participations, évidemment, ne sont pas garantis).

Ces renseignements seront suffisants pour permettre le calcul de la plupart des indices de comparaison des coûts qui peuvent intéresser les consommateurs.

En raison de la quantité des données, celles-ci ne sont pas publiées dans le présent rapport. Toutefois, toute personne intéressée peut obtenir ces renseignements dans le cas d'une compagnie enregistrée, en écrivant au Département des Assurances, Ottawa (Ontario), K1A 0H2.

## BASES OF VALUATION OF ACTUARIAL RESERVES

The coming into force of the new provisions relating to the determination of actuarial reserves during 1978 resulted in a number of changes in the manner in which actuarial reserves reported by registered companies were calculated. The summaries of assumptions and methods printed below for each company indicates, for each valuation basis used, the amount of reserve and the amount of insurance in force (amount of annual payment for annuities). At the beginning of the summary for each Canadian company, notes are provided giving additional details about the valuation assumptions and methods used by the valuation actuary in calculating the reserves for ordinary insurance policies, both participating and non-participating.

The notes preceding the summary for each Canadian company require some explanation because of the abbreviated terminology used to describe some of the methods employed. Given below is an explanation of the terminology used in the notes.

### Method Used for Deferring Acquisition Expenses

In addition to the abbreviations used in previous years (such as NLP for net level premium), the summary notes given below include the expression "1978 Canadian". This denotes the deferment of acquisition expenses to the extent permitted by the methods specified in subsections 82(5) and 82(7) of the Canadian and British Insurance Companies Act. This method permits the deferment of acquisition expenses in an amount equal to the lesser of 150 per cent of a net level annual premium and the amount of acquisition expenses actually incurred. The amount of acquisition expenses deferred is further limited by the requirement that they must be able to be recovered from margins available in future annual premiums. The valuation actuaries of most Canadian companies chose to defer acquisition expenses to some extent when determining the actuarial reserves. It should be noted that many companies chose to employ the "replacement method" to provide for cash value deficiencies and negative reserves (see below) and this reduced considerably the effect on income of the deferments.

### Withdrawal Rates

The notes that precede each valuation summary identify the table of withdrawal rates assumed by the actuary in the valuation of the major block of ordinary insurance business, separately for the participating and non-participating categories.

Where withdrawal rates from a commonly known table were used, the name of the table is indicated, for example, "Linton" or "Moorehead". "Nil" indicates that withdrawal rates have not been assumed in performing the valuation of the major block of a company's ordinary insurance business. In such cases, actuarial reserves held made adequate provision for cash values and negative reserves, most frequently through the use of the "replacement method" described below.

### Provision for Cash Value Deficiencies and Amounts of Negative Reserves

Pursuant to subsection 82.1(3) of the Canadian and British Insurance Companies Act, the Minister has required that where the reserves determined by the valuation actuary for certain policies are negative or are less that the cash surrender value available under the policy, a special reserve equal to the aggregate of such negative reserves and deficiencies must be shown as a special reserve in the annual statement. The valuation actuaries for some companies used valuation assumptions and methods that produced reserves that were never negative nor less than the corresponding cash surrender values. The provision for cash value deficiencies and negative reserves for these companies is described in the notes as "precluded by methods and/or assumptions". A number of companies provided for cash value deficiencies and negative reserves by using what is described in the notes as the "replacement method". In determining the aggregate amount of actuarial reserves reported as a liability, companies using the "replacement method" substituted the cash surrender values for the calculated actuarial reserves at any duration where the calculated reserves were less and substituted zero for any negative reserves. Other companies provided for the cash value deficiencies and negative reserves by establishing a special reserve in the form of an appropriation of surplus.

### Providing for Policyholder Dividend Expectations

Valuation actuaries have adopted a variety of different approaches when choosing valuation assumptions appropriate for participating business. For purposes of the notes, these have been described under two basic approaches.

(a) A number of valuation actuaries chose to calculate the actuarial reserves for participating policies by treating future dividends, which are not guaranteed, as a policyholder benefit to be discounted and reserved for in the same manner as the guaranteed death benefits. In such cases, the valuation assumptions chosen were usually close to, and perhaps more liberal, than those deemed appropriate for non-participating policies. The

assumptions were generally those inherent in the current dividend scale. This method is described in much of the actuarial literature as being the "explicit method". In the notes, this technique is identified under the label "valued as a specific benefit".

(b) Other valuation actuaries did not treat dividends as a specific benefit when calculating the reserve for participating policies. Instead, the actuarial reserves were determined by valuing only the guaranteed benefits using assumptions more conservative than those used for non-participating policies, thereby producing reserves that include margins from which future dividends may be paid. The assumptions used were frequently those on which the guaranteed cash surrender values are based. The notes describe this approach under the heading "provided from margins in valuation assumptions". This is basically the "implicit method" described in recent actuarial literature on the subject. Theoretically, if there is consistency between assumptions used in determining the dividend scale and the valuation assumptions, the "implicit" and "explicit" approaches to determining reserves for participating business should produce approximately the same aggregate result.

## CLASSES D'EVALUATION DES PROVISIONS ACTUARIELLES

L'entrée en vigueur des nouvelles dispositions relatives à la détermination des provisions actuarielles de 1978 a entraîné un certain nombre de changements dans la façon de calculer les provisions actuarielles déclarées par les compagnies enregistrées. Les renseignements figurant aux pages suivantes sur les hypothèses et les méthodes utilisées pour déterminer les provisions actuarielles de chaque compagnie indiquent, pour chaque classe d'évaluation utilisée, le montant de la réserve et le montant de l'assurance en vigueur (montant du paiement annuel au titre des rentes). Au début du résumé relatif à chaque compagnie canadienne, on trouvera des notes donnant des renseignements supplémentaires au sujet des hypothèses et des méthodes d'évaluation utilisées par l'actuaire responsable de l'évaluation dans le calcul des provisions relatives aux polices d'assurance ordinaire avec ou sans participation.

Les notes qui précèdent le résumé relatif à chaque compagnie canadienne doivent être expliquées en raison des abréviations employées pour décrire certaines des méthodes utilisées. On trouvera ci-dessous une explication des termes utilisés dans les notes. Les statistiques présentées ne s'appliquent qu'aux compagnies canadiennes,étant donné que, en règle générale, les compagnies britanniques et étrangères n'ont pas modifié leurs méthodes de détermination des provisions actuarielles de la même façon que les compagnies canadiennes.

### Méthode de report des frais d'acquisition

En plus des abréviations utilisées au cours des années précédentes (comme N.L.P. pour prime ordinaire nette, dite "Net Level Premium"), les notes sommaires présentées ci-dessous comprennent l'expression "1978 Canadienne". Cette expression s'applique au report des frais d'acquisition dans la mesure permise par les méthodes précisées aux paragraphes 82(5) et 82(7) de la Loi sur les compagnies d'assurance canadiennes et britanniques. Cette méthode permet de reporter des frais d'acquisition équivalents au moins élevé des montant suivants: 150 pour cent d'une prime ordinaire nette annuelle ou le montant des frais d'acquisition réellement engagés. Le montant des frais d'acquisition reportés est de plus limité étant donné qu'il doit être recouvré à même les marges disponible en ce qui concerne les primes annuelles à percevoir. Les actuaires responsables de l'évaluation de la plupart des compagnies canadiennes ont choisi de reporter dans une certaine mesure les frais d'acquisition lorsqu'ils ont déterminé les provisions actuarielles. La période d'amortissement des frais reportés variait considérablement. Il faut souligner que bon nombre de compagnies ont choisi d'utiliser la "méthode de remplacement" afin de prévoir l'excédent de la valeur de rachat sur les réserves et les réserves négatives (voir ci-dessous), ce qui a réduit considérablement les incidences sur le revenu des reports prévus.

### Taux de retrait

Les notes qui précèdent chaque résumé d'évaluation désignent la table des taux de retrait prévus par l'actuaire dans l'évaluation de la principale tranche des polices d'assurance ordinaire; cette évaluation est effectuée distinctement pour les polices avec participation et sans participation.

Lorsque les taux de retrait d'une table généralement reconnue sont utilisés, le titre de la table est indiqué, par exemple "Linton" ou "Moorehead". L'expression "Néant" indique que l'on n'a pas prévu de taux de retrait dans le cadre de l'évaluation de la principale tranche des polices d'assurance ordinaire d'une compagnie. Dans ces cas, les provisions actuarielles détenues assuraient une provision suffisante pour les valeurs de rachat et les réserves négatives, le plus souvent grâce à l'utilisation de la "méthode de remplacement" décrite ci-dessous.

### Provision pour l'excédent de la valeur de rachat sur la réserve et pour les réserves négatives

Conformément au paragraphe 82.1(3) de la Loi sur les compagnies d'assurance canadiennes et britanniques, le Ministre a demandé que, lorsque les réserves déterminées par l'actuaire responsable de l'évaluation à l'égard de certaines polices sont négatives ou inférieures à la valeur de rachat en vertu de la police, une réserve spéciale égale à l'ensemble de ces réserves négatives et de l'excédent de la valeur de rachat sur la réserve soit inscrite à titre de réserve spéciale dans l'état annuel. Les actuaires responsables de l'évaluation de quelques compagnies ont utilisé des hypothèses et des méthodes d'évaluation qui ont donné des réserves qui n'étaient jamais négatives ni inférieures aux valeurs de rachat correspondantes. Dans le cas de ces compagnies, les notes indiquent que les méthodes ou les hypothèses rendent "la provision pour l'excédent de la valeur de rachat sur la réserve et pour réserves négatives superflue". Plusieurs compagnies ont établi une provision pour l'excédent de la valeur de rachat sur la réserve et pour réserves négatives en utilisant ce que l'on appelle dans les notes la "méthode de remplacement". Dans le calcul du montant global des provisions actuarielles figurant au passif, les compagnies qui ont utilisé la "méthode de remplacement" ont remplacé les provisions actuarielles calculées pour toute durée par les valeurs de rachat lorsque les réserves calculées étaient inférieures et par zéro dans le cas de toute réserve négative. D'autres compagnies ont établi une provision

pour l'excédent de la valeur de rachat sur la réserve et pour réserves négatives en établissant une réserve spéciale sous la forme d'une affectation de l'excédent.

Provision pour les participations

Les actuaires responsables de l'évaluation ont adopté une gamme de méthodes pour choisir les hypothèses d'évaluation qui conviennent aux polices avec participation. Aux fins des notes, ces méthodes ont été regroupées selon deux méthodes fondamentales.

a) Un certain nombre d'actuaires responsables de l'évaluation ont choisi de calculer les provisions actuarielles relatives aux polices avec participation en traitant les bénéfices futurs, qui ne sont pas garantis, comme des prestations versées à un titulaire de police qui doivent être actualisées et mises de côté de la même façon que les prestations de décès garanties. Dans ces cas, les hypothèses d'évaluation choisies se rapprochaient habituellement de celles qui ont été jugées convenables pour les polices sans participation et étaient peut-être plus généreuses. En règle générale, les hypothèses étaient celles qui étaient inhérentes au barème actuel des participations. Cette méthode est décrite dans la plupart des publications sur l'actuariat comme la "méthode explicite". C'est ce qu'on appelle, dans les notes, la technique des participations à répartir "évalués de manière "explicite".

b) D'autres actuaires responsables de l'évaluation n'ont pas traité les bénéfices comme une prestation particulière dans le calcul de la réserve au titre des polices avec participation. Ils ont plutôt déterminé les provisions actuarielles en n'évaluant que les prestations garanties grâce à des hypothèses plus conservatrices que celles qui ont été utilisées dans le cas des polices sans participation, ce qui a donné des réserves qui comprennent des marges à répartir desquels des participations peuvent être versées. Les hypothèses utilisées étaient souvent celles sur lesquelles se fondent les valeurs de rachat garanties. C'est ce qu'on désigne dans les notes par l'expression "prévus dans le choix des hypothèses actuarielles". Il s'agit fondamentalement de la "méthode implicite" décrite dans les récentes publications actuarielles portant sur le sujet. Théoriquement, s'il y a uniformité entre les hypothèses utilisées pour déterminer les réserves au titre des polices avec participation devraient donner à peu près les mêmes résultats dans l'ensemble.

Where a mortality table has been modified by means of an age rating, the number of years that each age is rated up (+) or down (-) is shown in parentheses following the name of the table: e.g. 1937SA(-1) means the 1937 Standard Annuity Table with the age rated down one year.

Lorsqu'une table de mortalité a été modifiée par une augmentation ou une diminution d'âge le nombre d'années dont chaque âge a été augmenté (+) ou diminué (-) est indiqué entre parentheses à la suite du titre de la table. Ainsi, 1937SA(-1) signifie 1937 Standard Annuity Table avec l'âge diminué d'un an.
